
International Logistics Management

What is an ITS Academy course?

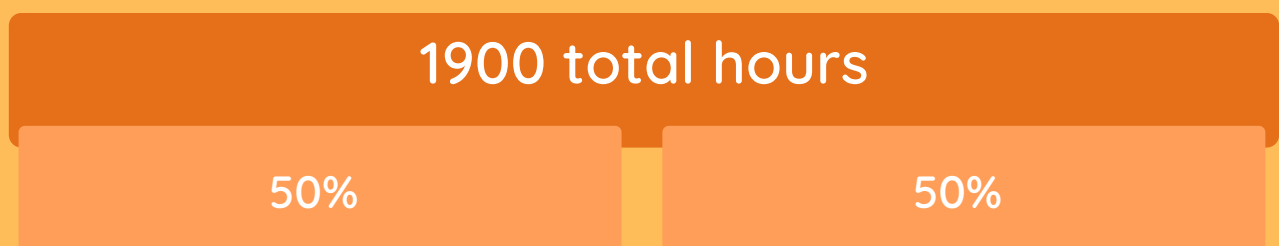

ITS Academy courses were established by the Prime Ministerial Decree of January 25, 2008.

These Higher Technical Institutes are part of the reorganization process of the Italian educational system.

ITS Academy LAST offers innovative two-year post-diploma programs that combine high-level training with work experience, in line with national industrial trends.

This is achieved through a continuous exchange with more than 600 companies in the territories where the Foundation operates, focusing on the development of skills and knowledge to create professional profiles tailored to real employment needs.

The courses are structured in two phases (applied across both years):

First part:

Classroom lessons

Lessons are primarily taught by professionals from the corporate world, as well as professors from the university sector. During classroom hours, students engage in both team and individual Project Work, company visits, and conferences.

Second part:

Curricular internship

Conducted within production facilities of the relevant sector, this part of the program is essential for putting the knowledge and skills acquired during the year into practice. It allows students to experience the corporate atmosphere and make themselves known to the company for potential career development after the program concludes.

Why attend an ITS Academy instead of other post-diploma paths?

For over 10 years, ITS Academy LAST courses have consistently ranked at the top of national leaderboards for educational quality. With average class sizes of 20 students, the academy boasts an employment rate of approximately 95% across all areas within one year of graduation. These programs allow you to gain work experience abroad through Erasmus+ and provide access to a network of more than 700 companies both regionally and nationally. Finally, the courses award a Higher Technical Diploma (Level 5 EQF).

Why choose the International Logistics sector?

Logistics has been one of the most steadily evolving sectors in recent years. In a fully interconnected world, there is a pressing need to integrate new and innovative skills within companies and industry operators, who now—more than ever—require specialized personnel.

These companies have found a new lease on life thanks to e-commerce, but that is not all. Significant investments in IT and the constant need to optimize costs have highlighted the crucial role of cutting-edge logistical services capable of supporting growth and expansion into international markets.

Descrizione del corso

The Higher Technical Manager in International Logistics operates within logistics service providers or manufacturing companies. This professional selects the most suitable solutions and tools for transport management and the distribution chain. They handle international contracts and taxation and are capable of organizing and managing international freight shipping and logistics, possessing administrative, operational, and managerial knowledge.

Furthermore, they can interface with companies operating both upstream and downstream in the logistics chain. They also acquire skills in interacting with client and supplier representatives to manage facilities and outsourcing services.

The specific objectives of the program focus on acquiring expertise in the following areas:

Integrated Corporate Logistics

An internal company function aimed at optimizing international flows and exchanges.

Logistics Supporting Exports

An operational and managerial role involving the ability to plan, support, and facilitate logistics flows that back the company's commercial strategies.

Transport Service Logistics

An organizational role that manages the preparation and execution of physical freight transport without performing the physical transport itself.

Warehouse Management

Understanding the logic governing warehouse operations, managing supplier relationships, and monitoring raw material and component stock levels.

Career Opportunities

The professional outlets for this program include:

- National/International Traffic Office Clerk (Ufficio Traffico)
- Customs Operator
